RN Nursing services - possible interventions with service codes (this list contains only suggestions – there may be other interventions)

Screening	Nursing assessment	st contains only suggestions – there big Diagnosis and planning	Consultation	Individual/ group health counseling and/ or instruction
<ul> <li>Screening refers to the process of assessing health status through individual or group observation in order to identify problems and determine if further assessment needed.</li> <li>Documentation is required if the child is referred for evaluation or treatment services identified as a result of the screen.</li> </ul>	Nursing assessment is the collection of data (both subjective and objective), observation, analysis and interpretation for the purpose of formulating a nursing diagnosis and developing a plan of care.	Nursing diagnosis is the identification of the problem areas that need to be addressed. Planning is the process of developing an appropriate plan of care based on the assessment and nursing diagnoses.	The role of consultation is monitoring, supervising, teaching, and training school staff or others providing care to the student. It can include:  providing general information about a child's condition  teaching specific skills necessary to meet a child's needs  making recommendations to enhance a child's performance  developing, maintaining, and demonstrating use of adaptive or assistive devises for a specific child	Health counseling and/ or instruction is intended to improve health status and effect change in self-care. It can be provided to an individual student or group or students.
Catheterization	Diabetes management	Feeding	Health support systems	Medications
